**Guide 777 Made From Leaves Using The Power Of The Sun!**

The latest innovation from Sweden is the brand new Guide 777 glove – a very airy and comfortable working glove which has been seamlessly knitted from fibres from leaves. This natural material – leaf fibre – is highly absorbent and moisture regulating which creates a feeling of cool comfort inside the glove. The energy used in the production of the glove comes from the sun using solar energy and the palm is coated with microporous latex, another natural product from the rubber tree. Amazingly enough these gloves are ideal for use in assembly and all round light work in factories, construction and diy/hobby use. The gloves also conform to CAT1 EN420.
